

## THE WORLD'S FINEST LASER SIGHTING SYSTEMS FOR FIREARMS

Crimson Trace makes the world's only grip-integrated laser sighting products for firearms. Our award-winning laser sights for guns including: pistols, revolvers and rail-equipped rifles, are widely accepted as an effective method of aiming and shooting. This is especially true in self-defense situations, due to seamless design integration and our patented Instinctive Activation™. The laser simply springs to life with a normal hold on your gun.

We currently offer more than 80 user-installed target acquisition units including: Lasergrips®, Laserguard®, Rail Master™, Modular Vertical Foregrips™, Lightguard™, Master Series™, Pro-Custom™, Defender Series™ and our new line of Green Laser Sights. We do this for shooters - from military and law enforcement to defensive-minded citizens - who know that a Crimson Trace laser on their weapon takes nothing away from their skill as a shooter, while adding an advantage they otherwise wouldn't have.
