

Caliber	12 gauge 3"
Barrel length	18.5"
Total capacity	6+6+1
Weight empty	6.9lbs
Weight loaded	8.5lbs
Length	26.1"
Height	7"

This simple and reliable pump action feeds from either the left or right tube. The feed side is manually selected by a lever located behind the trigger guard.

The pump includes an under picatinny rail for the mounting of a forward grip, a light, or a laser. The included top picatinny sight rail will accept many types of optics or iron sights. Forward and rear sling loops are built in, and a basic sling is included. The soft rubber butt pad helps to tame recoil.

The KSG receiver is made from hardened steel and includes the magazine tubes which have been welded in place. The grip and stock assembly is made of glass

reinforced nylon (Zytel) and is easily disassembled by pushing out 2 pins, which store in 2 holes in the grip when removed. The barrel and pump assembly is removed by loosening the 2 front magazine tube nuts with a coin and sliding the assembly forward.
