

LWRC REPR

The unique LWRCI™ Rapid Engagement Precision Rifle (R.E.P.R.) is a full spectrum weapon system designed to put devastating 7.62mm NATO rounds on target in a variety of roles. The R.E.P.R. rifle allows a marksman to perform assaulter duty with the 16" barreled upper installed, and quickly switch to a sniper role simply by changing to the 20" barreled upper. The extra upper receiver assembly can be carried in a backpack and takes up less room and weighs less than carrying a separate rifle.

The R.E.P.R. rifle utilizes our patented self-regulating, short-stroke gas-piston operating system, ensuring unparalleled reliability in the harshest theaters of operation. A side-mounted charging handle allows the shooter to perform reloads without removing their eyes from the target, and prevents any gas blowback to the face when using a suppressor. The ARM-R™ rails are easily removable and reinstalled with a hex key and provide a 100% return to zero for optics and lasers.

The R.E.P.R. rifle is available in three models: Standard Model (16.1") and Sniper Model (20"). The DMR and Sniper models will feature Geissele triggers. Each R.E.P.R. rifle comes with one barreled upper, but extra uppers are available in light contour 16.1" and heavy contour 20" configurations. Custom packages including one lower and two or more barreled uppers

are available. These packages can be had with a variety of optics and accessories. Contact our customer service department for specifications.

New for 2012, we are offering the 16" R.E.P.R. with a spiral fluted barrel. The spiral fluting shaves weight while relieving longitudinal stresses that can cause 'stringing' in barrels with conventional linear fluting.

The revolutionary LWRC International R.E.P.R. rifle is truly a force to be reckoned with.

Caliber: 7.62 NATO/.308 Winchester

Barrel Length: 16.1", 20"

Weight (unloaded): 9.5lbs (16.1"), 11.25lbs (20")
